About Us

At Security Professional Group(SPG), we empower organizations to navigate the evolving digital landscape with precision, integrity, and cutting-edge cyber security solutions-bridge
in tradition and innovation to protect what matters most.

Cybersecurity Consultation

Ourexpert- led cyber security consultations deliver tailored strategies in offensive security, compliance, and risk management empowering your organization to stay resilient, secure, and ahead of emerging threats.

Company Details

Security Professional Group (SPG) is a Riyadh- based cyber security firm with head quarters in Perth, Australia, specializing in offensive security, GRC,OT/IoT protection, and AI-driven solutions for SMBs and enterprise clients.

Cybersecurity Solutions

We provide end-to- end cyber security solutions from penetration testing and GRC frameworks to OT/IoT defense and AI-driven threat detection engineered to safeguard your digital infrastructure with precision and scalability.

Contents

Our Clients

We proudly served inverse portfolio of clients from SMBs to enter prereleases—who trust SPG to deliver precision- driven cyber security solutions tailored to the industry, infrastructure, and strategic goals.

SPG At the World

From Riyadh to Perth and beyond, SPG delivers world-class cybersecurity expertise across continent protecting digital eco systems, empowering industries, and shaping the future of secure innovation.

About Us

Security Professionals Group specializes in two core service areas: Cybersecurity Consultation and Cybersecurity Solutions. Our expertise spans offensive security testing, governance, risk and compliance, operations support, and secure architectural design, complemented by advanced offerings such as AI-powered security testing and tailored solutions for SMBs. We serve a diverse client base across finance, healthcare, government, and other sectors, with operations in Australia and international markets. Led by certified professionals holding credentials including CISSP, OSCP, CISA, CEH, and SANS, our leadership combines global experience with deep technical knowledge. We maintain partnerships and certifications with leading industry bodies and vendors such as ISO 27001, CREST, NIST, Microsoft, AWS, Palo Alto, and Fortinet. Demonstrated through anonymized case studies, client testimonials, and proven results, we consistently deliver measurable value. Committed to transparency and compliance, we align with Australian cybersecurity legislation and ACSC frameworks. Our company profile is available in PDF, Word, and web formats, supported by strong visual branding and accessible contact information for seamless client engagement.

Company Details

Security Professionals Group is a leading Australian cybersecurity company headquartered in Perth, Western Australia, operating under a proprietary limited business structure. Established by seasoned experts in the field, the company is registered with an CAN: 689050397 and represented by aprofessional, high-resolution brand identity and logo. Cyber security Attacks

Overlooking GRC and Security Testing Cybersecurity attacks surged between 2020 and2025,targeting governments, corporations, and individuals worldwide. Ransomware became a dominant threat, with groups like REvil and Lock Bit demanding millions. Supply chain attacks, such as the SolarWinds breach, exposed vulnerabilities in trusted systems. These years highlighted the urgent need for stronger digital defenses.

Environment lost Reputations

Reputations and Financial Between 2020 and 2025,environmental disasters and mismanagement led to a global loss of reputation and financial damage estimated at 110 billion US dollars. Oil spills, deforestation, and climate-related events harmed ecosystems and public trust. Many companies faced backlash for neglecting sustainability, prompting stricter regulations and greenreforms.

Expert Consultation Overview

Cyber security Offensive

SPG delivers precision-driven offensive security testing designed to uncover vulnerabilities before attackers do.

Cyber security GRC

GRC frameworks align cyber security with business objectives, ensuring regulatory compliance and Risk mitigation. Effective GRC practices build trust and resilience across the organization.

Cyber security Design

A robust cyber security architecture integrates security into every layer of the IT environment. It Ensures scalable, resilient, and compliant systems across cloud, network, and end point domains.

Cyber security OT

Securing industrial systems like SCADA and ICSis critical to protecting infrastructure. OT security focuses on minimizing downtime, preventing sabotage, and ensuring safe operations.

Securing Trust, Delivering Excellence:

Quality in Action

At SPG, quality isn't a promise it's a discipline. Every solution we deliver, from offensive security to GRC and OT/IoT protection, is crafted with precision, tested for resilience, and delivered on time. Our clients don't just get cyber security they get strategic assurance backed by technical excellence and cultural integrity.

Precision in Every Moment

We deliver cybersecurity solutions with unmatched accuracy, speed, and reliability because precision isn toptional,it s ourstandard.

Built on Trust

At SPG, trust is not earned through words it's proven through action. We deliver cybersecurity solutions with precision, transparency, and unwavering reliability. Our clients know that every engagement is handled with integrity, confidentiality, and a deep respect for their mission. From strategy to execution, SPG stands as a trusted partner committed to protecting what matters

SPG

Defend360 AI

Autonomous Cyber Defence. Engineered by SPG.

Defend360 AI is SPG's flagship AI-native cybersecurity platform a unified command centre that consolidates what used to take a
dozen point tools, three vendors, and an under-resourced SOC into one intelligent, agentic system. Built from the ground up
around Large Language Model reasoning, Defend360 AI doesn't just alert — it observes, orients, decides, and acts.

What Defend360 AI Delivers

IncidentCommand AI-orchestrated incident response with playbook automation, evidence capture, and post-incident reporting.
VulnGuard Continuous vulnerability discovery, risk-scored prioritisation, and AI-driven remediation guidance.
PatchOps Closed-loop patch lifecycle from CVE approval deployment verification, with a curated app catalogue.
ThreatRadar Live threat intelligence fused with MITRE ATT&CK, CISA KEV, and dark-web signal mapped to your environment.
AutoShield (SOAR) Agentic remediation: isolate endpoints, block IPs, disable accounts, quarantine messages with human-in-the-loop approval gates.
UEBA & InsiderGuard Edge-mode behavioural analytics that detect insider threat and account compromise locally, transmitting only verified alerts.

Defend360 AI

ComplianceReady (GRC) Continuous compliance against ISO 27001, NIST CSF, PCI-DSS, HIPAA, Essential Eight, SOC 2, and 40+
regulatory frameworks with AI-generated evidence packs and gap remediation plans.
CyberReady Phishing simulation, security awareness training, and human-risk scoring integrated with your identity provider.
ClaudeGuard A six-pillar AI security layer that protects the platform itself, including code audit, runtime monitoring, payload inspection, and tenant threat shielding.
Defend360 Chat A conversational cybersecurity analyst grounded in your live posture data, with voice I/O and visual reasoning (kill chains, attack trees, bow-tie analysis).

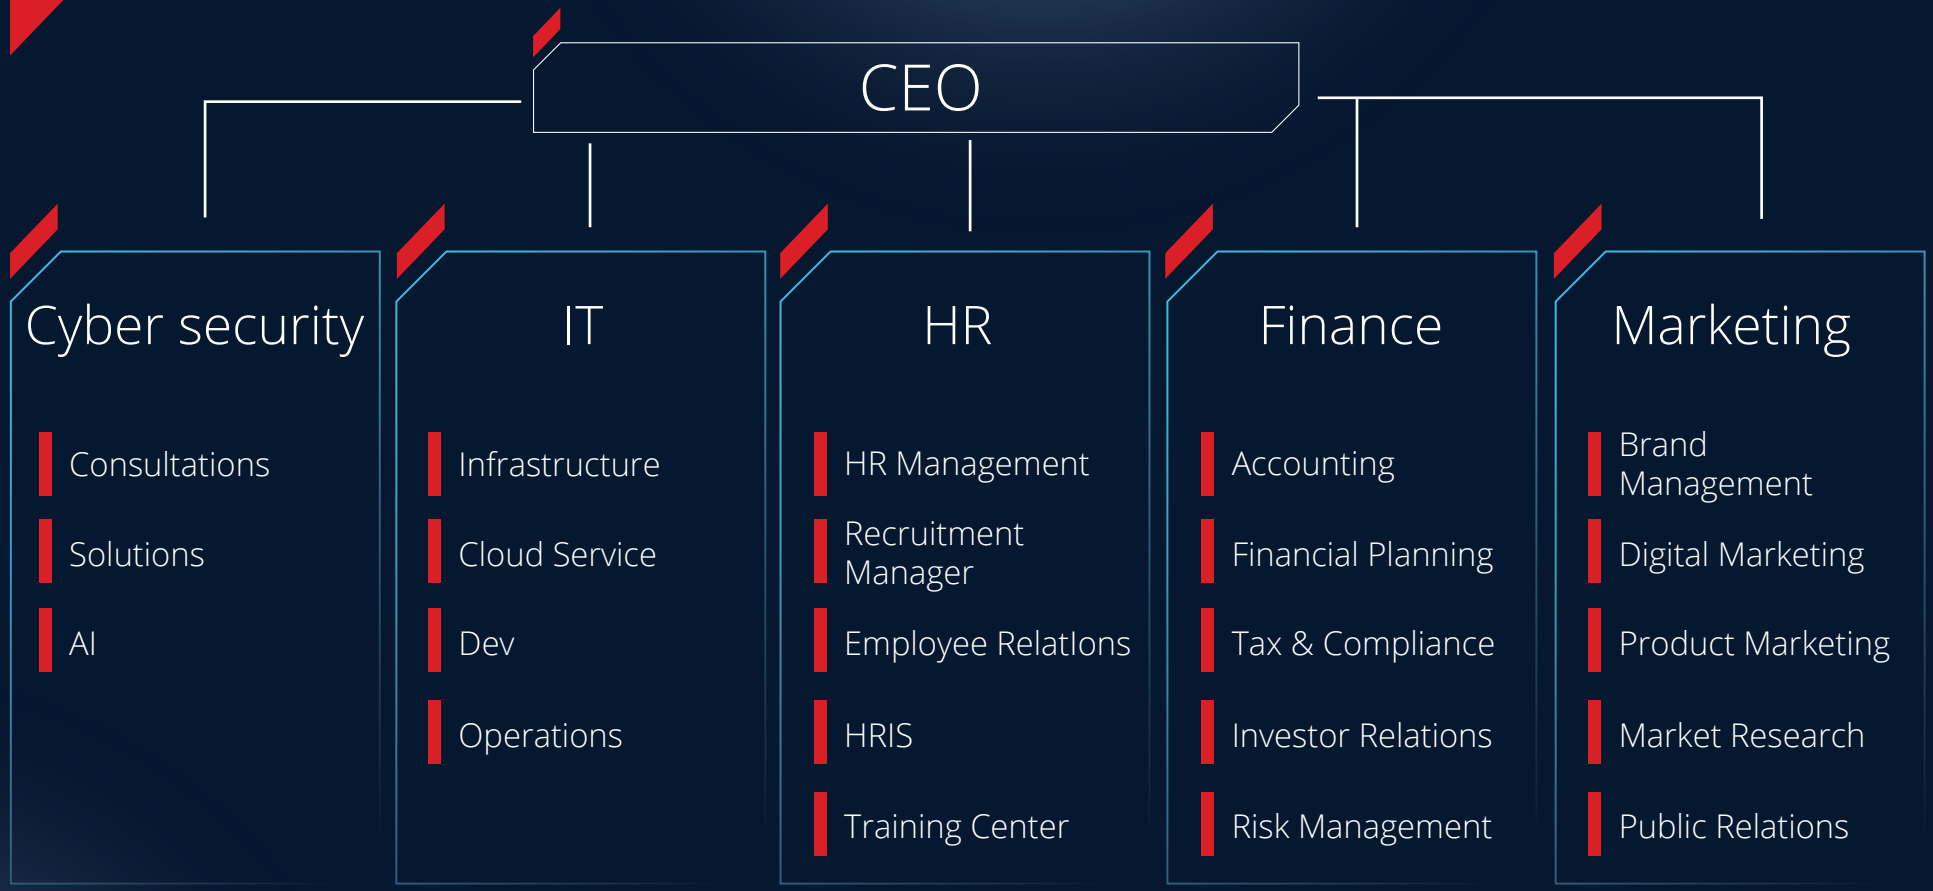

Why Customers Choose Defend360 AI

AI-Native, Not AI-Bolted-On Reasoning lives at the core, not as a chatbot afterthought.
Multi-Tenant by Design Built for MSSPs, enterprises, and regulated industries with strict data segregation and per-tenant AI
privacy controls.
Sovereign Deployment Choose SaaS (defend360.ai), private cloud, or fully on-premises with our hardened installer. Your data, your jurisdiction, your rules.
One Pane, Real Outcomes Replace 8–12 disconnected tools with a single platform that measurably reduces dwell time, audit prep effort, and SOC overhead.
Engineered in Australia Designed and built by SPG to meet the toughest sovereign, regulated, and critical-infrastructure requirements.Built for CISOs, security operations teams, GRC leaders, MSSPs, and any organisation that needs enterprise-grade cyber defence without the enterprise-grade complexity.
Defend360 AI see everything, decide faster, defend automatically.
